KBR Subsidiary to Execute Pre-FEED Study for Bonaparte LNG Project

KBR (NYSE: KBR) announced today that its consulting subsidiary, Granherne, has been selected by GDF SUEZ Bonaparte Pty. Ltd. (GDF SUEZ) to execute the Upstream pre-Front End Engineering and Design (pre-FEED) study for the Bonaparte Liquefied Natural Gas (LNG) Project, a proposed floating liquefaction plant to be located in the Bonaparte Basin, Northern Territory, Australia.

The project, being developed through a joint venture between GDF SUEZ and Santos Ltd., has a planned LNG capacity of two million tonnes per annum (mtpa).

Granherne will provide a single integrated service for the Upstream pre-FEED, comprising various disciplines such as subsea engineering, field development planning, process, safety engineering and flow assurance. The project will be managed by Granherne s Asia-Pacific regional office in Perth.

This is an exciting project for Granherne. Execution of the Bonaparte pre-FEED allows the company the opportunity to support a significant global player on a challenging floating LNG project, said Richard D Souza, Vice President, Granherne Global Operations. This contract award also allows Granherne the opportunity to expand its portfolio to include the growth of our multi-discipline capabilities in the Asia-Pacific region.

Granherne, a wholly owned subsidiary of KBR, is a leading front-end engineering consultancy for onshore, offshore and deepwater oil and gas developments with experience of over 3,000 projects in more than 20 countries. For more information visit www.granherne.com.

KBR is a global engineering, construction and services company supporting the energy, hydrocarbon, government services, minerals, civil infrastructure, power and industrial markets. For more information, visit www.kbr.com.
